

## CLAIMS

What is claimed is:

1. A multi-compartment pill container for holding a  
5 quantity of medication, comprising:

a housing, the housing having a top surface, two side walls, a front wall, and a rear wall, wherein the top surface has seven top surface openings extending vertically downward into the top surface of the housing;

- 10 seven compartments, each compartment corresponding to a day of the week and selectively mateable with one of the housing top surface openings, each compartment being selectively removable from the housing, said compartment having a bottom surface, a top edge, four side walls, and a  
15 plurality of separation walls extending vertically between the bottom surface and the top edge, wherein the separation walls divide each compartment into a plurality of chambers, and a chamber cover extends over each chamber, each chamber cover having a top surface and a flange extending outward  
20 from the top surface for opening the cover; and

a timer, the timer capable of sounding alarm once per day for each of the chambers in one of the compartments

- 25 2. The multi-compartment pill container as recited in claim 1, further comprising a container lid extending over the top surface of the housing, the lid having a front wall, a rear

wall attached to the housing rear wall, and clips secured to the lid front wall, wherein the clips are selectively mateable with the housing lip.

5     3.     The multi-compartment pill container as recited in claim 2, wherein each compartment is divided into four separate chambers, each chamber corresponding to a time of the day, and wherein the timer sounds four alarms during the day.

10    4.     The multi-compartment pill container as recited in claim 3, wherein each chamber cover has indicia printed on the top surface.

15    5.     The multi-compartment pill container as recited in claim 4, wherein the indicia on each compartment indicates a portion of the day, such as "AM", "Noon", "Evening", and "Bed" and indicia on the compartments each indicates one of the days of the week.

20    6.     The multi-compartment pill container as recited in claim 5, wherein the housing top surface further comprises a circular hole, said hole extending between the top surface and the bottom surface of the housing, and further comprising a drinking cup which fits within the hole to provide the user  
25    with a means for drinking a liquid to facilitate the taking of medication.

7. The multi-compartment pill container as recited in claim  
6, wherein the housing top surface has another circular hole,  
and wherein the timer is circular and is sized to be  
selectively mateable with said other the housing top surface  
5 circular hole.

8. The multi-compartment pill container as recited in claim  
7, wherein the cup in telescoping .

10 9. The multi-compartment pill container as recited in claim  
8, further comprising a pouch sized to accommodate the  
container, the pouch having a top opening through which the  
container is inserted and drawstrings encircling the top  
opening used to cinch said top opening to prevent the  
15 container from slipping out of the pouch.
